School Sense: How to Help Your Child Succeed in Elementary School [Tiffani Chin, PH D Chin] on Amazon.com. *FREE* shipping on qualifying offers. Twenty-six million American families have elementary school-aged children. Many of these parents are plagued with a wide range of questions and doubts about how to help their children succeed in school: How do I choose the best school for my child? School Sense: How to Help Your Child Succeed in Elementary School gives parents a head start by providing them with the information they need to make the most of their children's elementary school experience. The goal of this book is to provide you with information that will help you to develop your own common sense-or "school sense," if you will-to help you navigate the elementary school years. This book also assumes that you and your family have your own political, moral, and religious values. In elementary school, kids usually take end-of-unit tests in math, spelling, science, and social studies. Be sure to know when a test is scheduled so you can help your child study ahead of time rather than just the night before. You also might need to remind your child to bring home the right study materials, such as notes, study guides, or books.
